BOARD INFINITY

BOARD INFINITY GROWTH CASE STUDY FOR LINKEDIN

Scaling EdTech Growth: 3.45x ROAS via Integrated Digital Marketing

Overview: How a data-driven website redesign, multi-channel acquisition funnel, and executive measurement architecture transformed lead velocity for non-tech career switchers.

The Challenge:

As part of a comprehensive capstone growth initiative for Indian EdTech platform Board Infinity, the primary objective was to diagnose organic search friction, eliminate user journey bottlenecks for non-tech career switchers, and architect a high-performing paid acquisition model operating on a ₹1,00,000 monthly budget.

Phase 1: Technical SEO & UX Overhaul

- **Audit Insights:** A comprehensive crawl of 500 URLs revealed critical technical blockers, including broken 404 links, uncompressed image assets driving mobile LCP up to 5.8 seconds, and dead course hubs.
- **UX Transformation:** Flattened overcrowded top-navigation architectures into a clean 3-core career hub structure and introduced a 2-minute interactive Career Path Quiz overlay to reduce cognitive friction for non-tech students (the "Aarav" persona).

Phase 2: Content Marketing Funnel & Paid Media Strategy

- **SEO Keyword Strategy:** Closed high-intent keyword gaps against top competitors (UpGrad, Simplilearn) by capturing high-volume transactional search queries.
- **Paid Ad Model:** Deployed a ₹1,00,000 budget split across Google Search (50%), Meta Ads (30%), and LinkedIn (20%), incorporating strict negative keyword guardrails to protect ad spend.
- **Retargeting Campaigns:** Designed sequential 5-card Meta carousels leveraging peer alumni success stories (e.g., 140% salary hikes) to overcome coding fear and build instant trust.

Phase 3: Measurement & Executive Reporting

- **Analytics Implementation:** Configured robust GA4 custom event tracking schemas for primary and micro-conversion goals (generate_lead, file_download, conversion_intent).
- **Looker Studio Dashboard:** Consolidated real-time metrics showcasing 125.3K total users, an optimized CPL of ₹500.00, a 7.02% conversion rate, and a 3.45x Gross ROAS delivering ₹2,45,150 in net profit.
