BOARD INFINITY

Capstone Case Study Baseline & Strategic Framework

Board Infinity's Business Brief

Executive Overview:

Board Infinity is an Indian EdTech platform offering career-focused upskilling bootcamps in Data Science, Digital Marketing, and Software Engineering. It connects early-career learners with industry mentors and corporate recruiters. This brief establishes the operational baseline for your capstone redesign and marketing optimization project.

PROJECT BY: MOHAMMAD MAAZ ANSARI

Week 1

1. Strategic Ecosystem & Value Proposition

❑ Supply Side (Learners & Freshers)

- **Target Audience:** Tier-2/3 college grads & early professionals.
- **Core Pain Point:** Lack of practical coding/analytics skills and job placements.
- **Value Proposition:** Live cohort bootcamps, 1-on-1 industry mentorship, and verified placement support.

❑ Demand Side (Employers & Mentors)

- **Target Audience:** Tech startups, SMEs, and corporate recruiters.
- **Core Pain Point:** High hiring cost and unvetted fresh engineering candidates.
- **Value Proposition:** Pre-screened, job-ready candidate pipeline with verified project portfolios.

2. Business Model Canvas Overview

Building Block	Strategic Detail & Application
Key Partners	Corporate hiring partners, university placement cells, tech industry mentors, payment gateway partners.
Key Activities	Curriculum design, live cohort delivery, mentor onboarding, performance marketing, and corporate recruiter matching.
Customer Segments	Final-year college students, non-CS graduates seeking tech roles, working professionals upskilling for salary hikes.
Channels	Organic search (Google), performance ads (Meta/Google), LinkedIn network, college seminars, and referral loops.
Cost Structure	Mentor honorariums, performance advertising (CAC), platform tech hosting, sales/counsellor commissions, content creation.

3. Key Operational Metrics Baseline

₹50K - ₹70K
Avg. Bootcamp Ticket

4.6 sec
Current Mobile Load Time

3.2%
Baseline Lead Conversion Rate

₹8,500
EST. Cost Per ACQ. (CAC)

4. Target User Persona: “Aarav - The Career Switcher”

Aarav Sharma (Age 23) Location: Tier-2 City (Jaipur / Pune)

❑ Goals & Aspirations:

- Transition into Data Analytics or Full-Stack Development.
- Secure a tech role in Bangalore or Gurgaon with 6+ LPA starting package.
- Build real-world projects to showcase on resume and GitHub/LinkedIn.

❑ Pain Points & Fears:

- College placement cell lacks access to high-growth tech companies.
- Low technical interview confidence and no practical portfolio.
- Afraid of high upfront tuition without placement guarantee.

5. Revenue Streams & Pricing Models

Revenue Channel	Model Mechanics	Strategic Focus For Project
• **Direct B2C Upfront Tuition**	Fixed fee (₹50K - ₹70K) paid via upfront payment or flexible monthly EMIs.	Optimize landing page forms and CTA buttons to increase checkout completions.
• **Hybrid / Income Share Model**	Low upfront registration fee + deferred placement success fee paid after securing a job.	Build trust signals, alumni video testimonials, and transparent terms above fold.
• **Corporate & Institutional B2B**	Bulk upskilling contracts with colleges and recruitment commission from hiring partners.	Create dedicated B2B landing page navigation and downloadable brochure lead magnets.

6. Strategic Capstone Focus Areas

Core Project Gaps to Solve:

- **UI/UX Friction:** Simplifying heavy top navigation into 3 core career hubs and add sticky "Book Free Counselling" CTAs on mobile views.
- **SEO & Keyword Strategy:** Targeting long-tail intent keywords like "data science bootcamp with placement assistance" to capture high-intent searchers.
- **Paid Acquisition & CAC:** Building a ₹1,00,000 monthly ad budget model allocating 50% to Google Search intent and 30% to Meta retargeting to achieve CPL under ₹450.

TASK: 2

Technical & On-Page Audit

Real-time crawl findings using Screaming Frog (500 URLs Audited)

1. Executive Scorecard

Crawl Efficiency

- 5 Broken 404 Links (1 URL has 63 Inlinks!)
- 270 Internal URLs Audited

Image Performance & ALT

- 40 Images Over 100 KB (17.8% of Total Images)
- 78 Images Missing Alt Text (34.7% Accessibility)

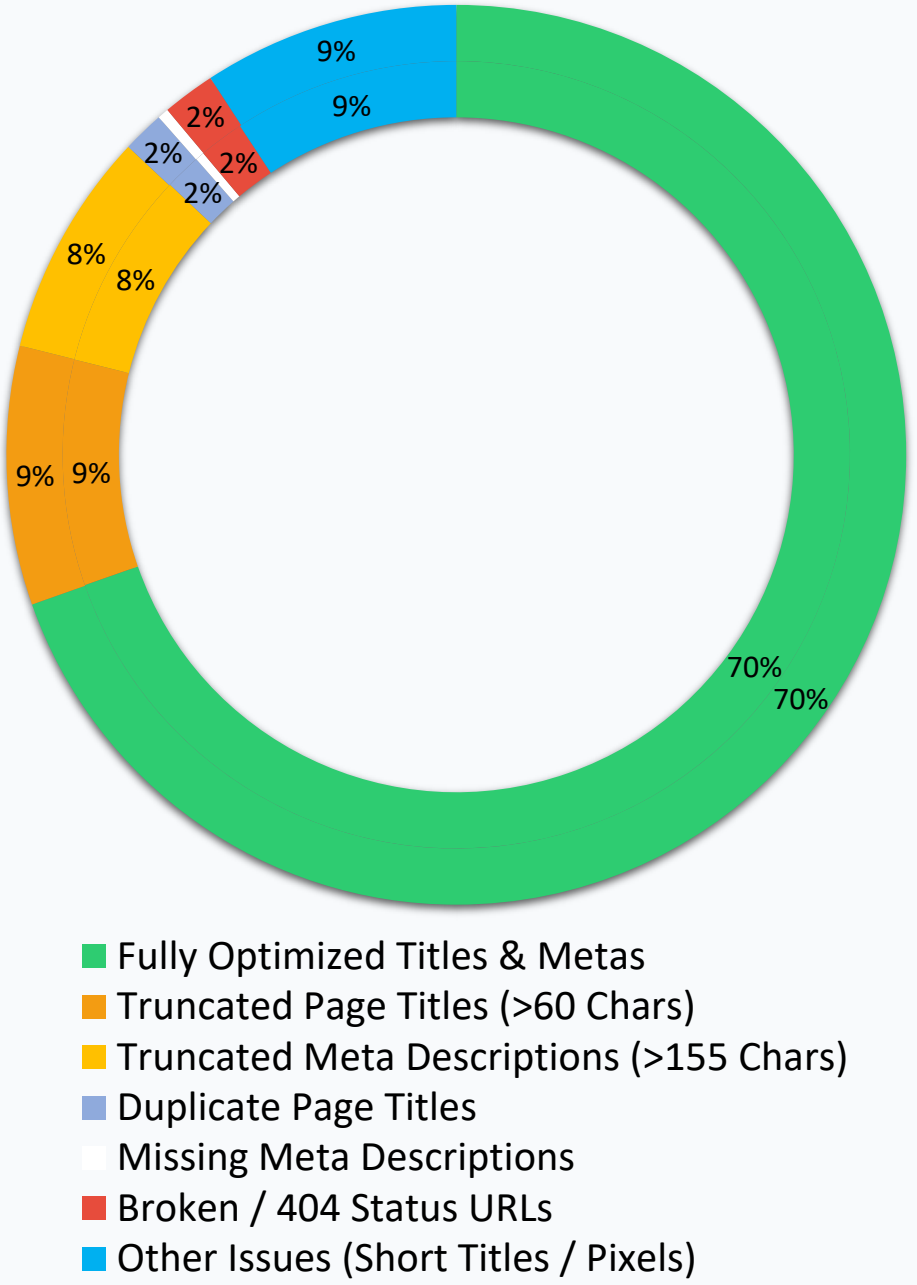

On-Page Metadata

- 25 Pages (23.4%) Titles Too Long (>60 Chars)
- 22 Pages (20.6%) Metas Too Long (>155 Chars)

❑ Metadata Health & Optimization Status

Metadata	Url Data	Per% Of Crawl Site
Fully Optimized Titles & Metas	188	69.60%
Truncated Page Titles (>60 Chars)	25	9.30%
Truncated Meta Descriptions (>155 Chars)	22	8.10%
Duplicate Page Titles	4	1.50%
Missing Meta Descriptions	1	0.40%
Broken / 404 Status URLs	5	1.90%
Other Issues (Short Titles / Pixels)	25	9.20%

The Chart Highlights how much of the site's metadata (Titles and Descriptions) suffers from optimization errors vs how much is properly configured.

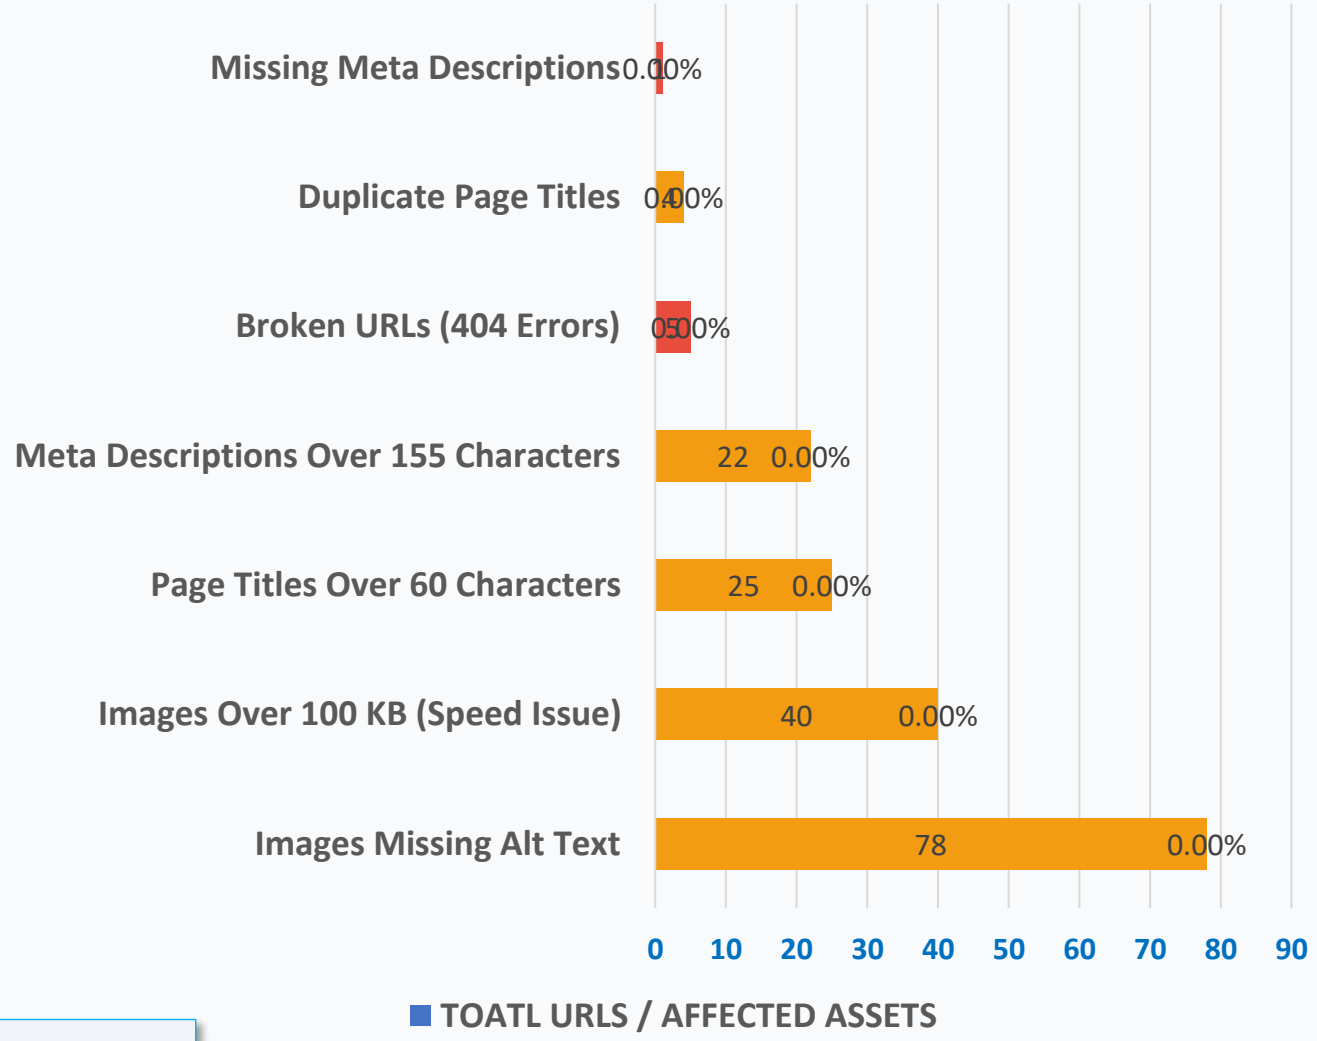

2. Detailed Findings & Impact Matrix

AUDIT CATEGORY	REAL DATA FROM CRAWL	IMPACT	PURPOSED FIX
• **Broken Internal Links (Response Codes)**	5 URLs return 404 Client Errors. One broken link receives 63 internal site links.	🟥 HIGH	301 Redirect or update internal links pointing to non-existent pages.
• **Page Titles (Page Titles Tab)**	25 URLs (23.36%) exceed 60 characters, 4 pages have duplicate titles.	🟧 MEDIUM	Truncate titles to 50-60 characters; resolve title duplication.
• **Meta Description (Meta description Tab)**	22 URLs (20.56%) exceed 155 characters,1 key hub page is missing a meta description.	🟧 MEDIUM	Rewrite snippets to stay under 155 chars with a clear Call-to-Action.
• **Site Peed & Assets (Image Tab)**	40 images (17.78%) exceed 100 KB, 78 images (34.67%) lack descriptive Alt text.	🟧 MEDIUM	Compress heavy PNGs to WebP, populate descriptive Alt attributes.

❑ On-page & Technical Issue Distribution

Technical Seo Issue Category	Total URLs / Affected Assets
Images Missing Alt Text	78
Images Over 100 KB (Speed Issue)	40
Page Titles Over 60 Characters	25
Meta Descriptions Over 155 Characters	22
Broken URLs (404 Errors)	5
Duplicate Page Titles	4
Missing Meta Descriptions	1

The Chart Compares the volume of technical SEO issues across different categories (Images, Metadata, Status Codes) to demonstrate issue prioritization.

3. Primary Recommendation For Redesigning

1. Prioritizing the fixing of internal broken link with 63 Inlinks to reclaim wasted crawl budget immediately.
2. Simultaneously, converting 40 uncompressed image assets to WebP format and
3. Optimizing snippet lengths across core course landing pages before launching new paid ad campaigns.

TASK: 3

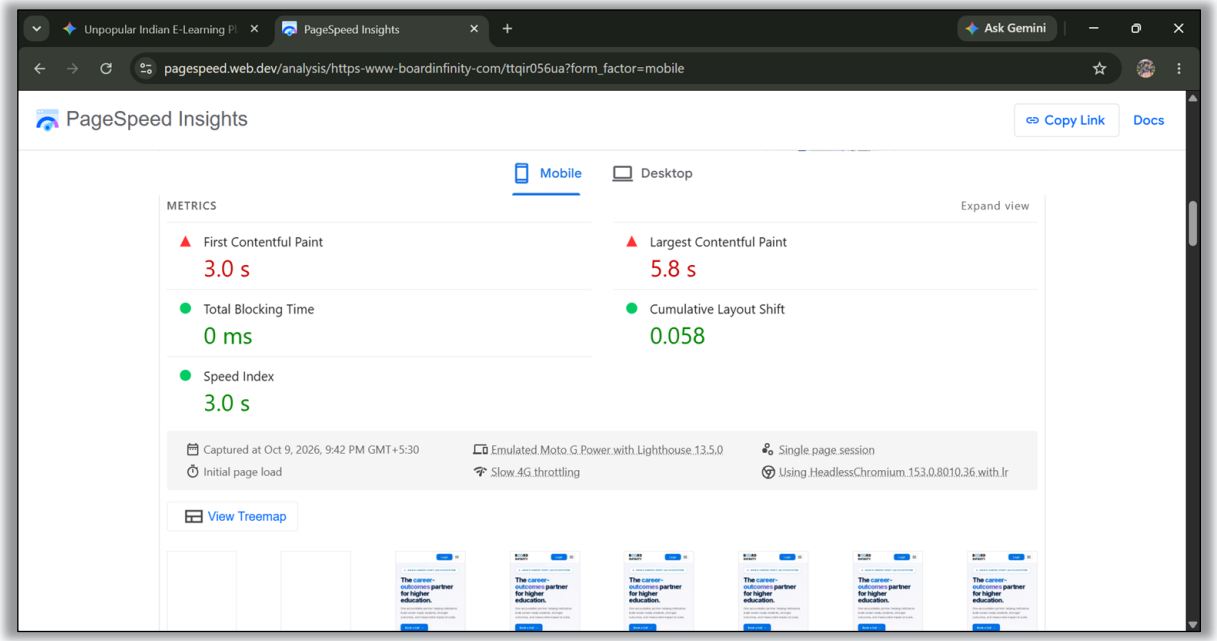

Website Speed Scorecard

Empirical PageSpeed Insights Audit across Homepage & Key Course Landing Pages.

1. Executive Audit Scorecard Table

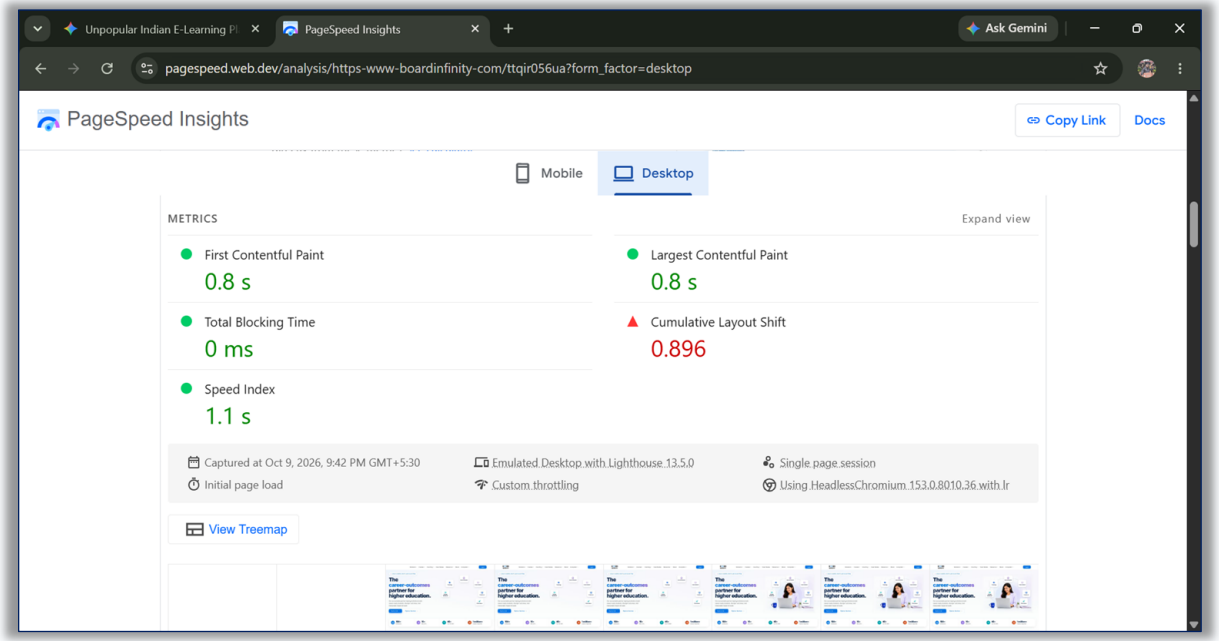

Audited URL	Device / View	Performance Score	LCP (Speed)	CLS (Shift)
Homepage	**Mobile**	73 / 100 🟡	5.8s 🔴 (Slow)	0.058 🟢
	Desktop	74 / 100 🟡	0.8s 🟢 (Fast)	0.896 🔴
Data Science Landing Page	**Mobile**	91 / 100 🟢	2.8s 🟡 (Medium)	0.002 🟢
	Desktop	99 / 100 🟢	0.8s 🟢 (Fast)	0.002 🟢

2. Screenshot Evidence & Critical Bottleneck Analysis

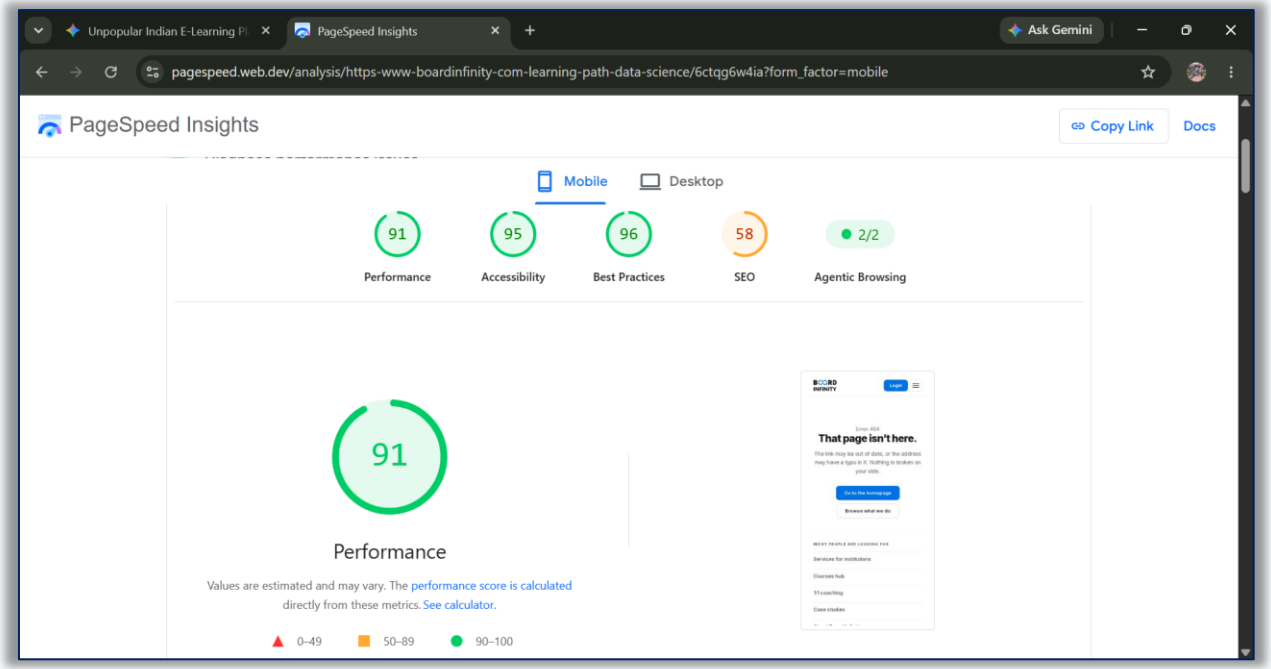

Homepage Mobile (5.8s LCP Delay)

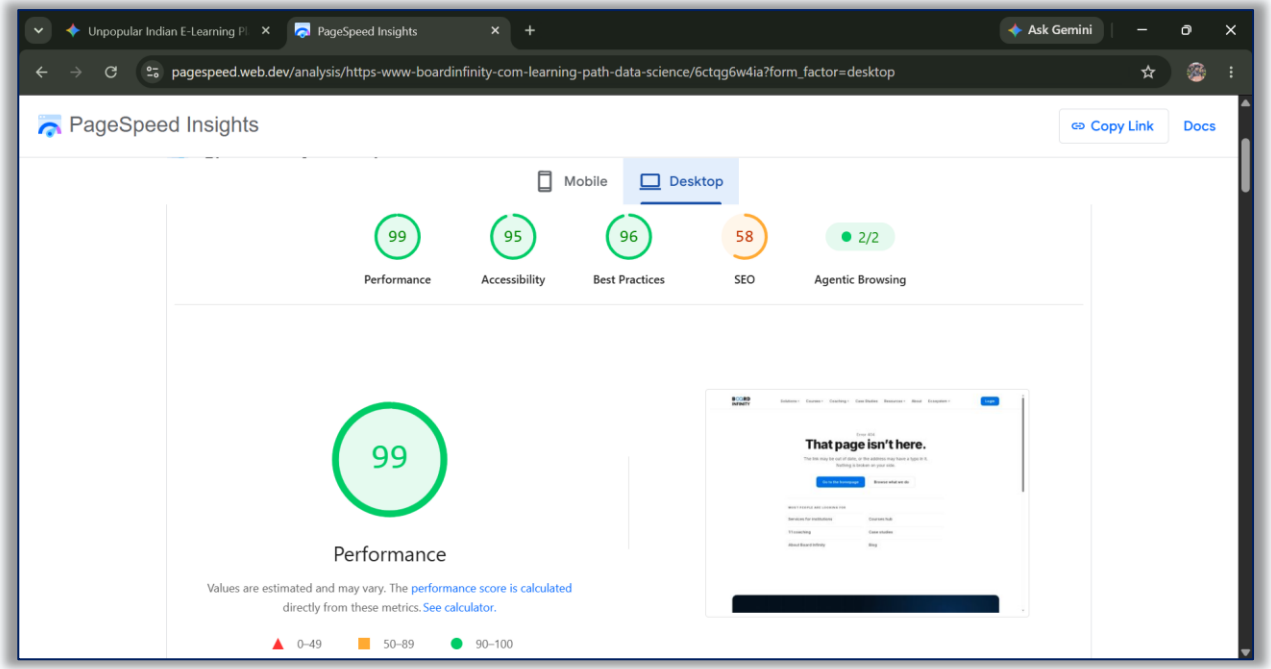

- LCP is 132% slower than Google's 2.5s limit
- Caused by 40 uncompressed images (>100 KB) loading over mobile throttled networks.

Homepage Desktop (0.896 CLS Shift)

- Layout shift is nearly 9x higher than 0.1.
- Unsized hero banner containers cause extreme page jumpiness during rendering.

🔴 **Critical Finding:** Data Science URL Returns 404 Error

- **Dead-End URL:** `/learning-path/data-science` loads a "That page isn't here" 404 template.
- **SEO Impact:** Low SEO score of 58/100 directly confirms Google treats this as non-indexable.

3. Recommended Technical Action Plan

1. **PrioFix Mobile LCP (5.8s to <2.5s):** By compressing heavy images into Next-Gen WebP formats.
2. **Fix Desktop CLS (0.896 to <0.1):** Setting explicit height/width dimensions on desktop hero banners.
3. **Restore Dead Course URL:** Building a live Data Science landing page hub or add a 301 redirect.

TASK: 4

UX Breakdown Deck

Visual UX Audit & Conversion Rate Optimization (CRO) Report

1. Executive Summary & Audit Scope

To evaluate user friction and conversion effectiveness on the Board Infinity platform, a heuristic visual UX audit was conducted. The audit focused on three critical conversion touchpoints:

- **Above-the-fold CTA clarity and visual hierarchy** on the homepage hero section.
- **Navigation depth and information architecture** via the primary header mega-menu.
- **Lead form friction and input volume** during gated resource downloads (e.g., placement reports and case studies).

2. Comprehensive UX Audit Matrix

Audit Focus Area	Above-the-Fold & CTA Clarity
Current UX Observation	The hero section features multiple competing actions ("Book a Call", "Explore Services") alongside heavy feature iconography.
Friction Level	🟡 MEDIUM
UX Impact & Root Cause	Visual clutter splits user attention, diluting focus from the primary conversion goal within the critical 3-second window.
Redesign Solution	Restructure the hero section layout to emphasize a single, high-contrast primary CTA while styling secondary actions as subtle outlines.

Audit Focus Area	Current UX Observation	Friction Level	UX Impact & Root Cause	Redesign Solution
Navigation Depth & Menu Architecture	The header mega-menu categorizes offerings by audience and domain, but requires multi-tiered exploration.	🟡 MEDIUM	Deeply nested category paths increase user effort and cognitive load when searching for specific course outcomes.	Flatten navigation depth by implementing direct 1-click links to flagship course hubs in a streamlined mega-menu.
Lead Form Friction (Gated Content)	Downloading the Placement Outcomes PDF report triggers an embedded form requiring extensive multi-field input (Name, Work Email, Institution, Role).	🔴 HIGH	Requesting detailed institutional or professional data upfront creates high conversion friction and spikes mobile drop-off rates.	Streamline initial lead capture forms to 3 essential inputs (Name, Email, Phone); defer secondary profiling to post-submission steps.

3. Key UX Insights & Strategic Recommendations

- **Optimize Above-the-Fold Visual Hierarchy:** Streamlining the homepage hero section will reduce visual noise and guide prospective learners instantly toward high-intent conversion pathways like booking a counselling session.
- **Reduce Lead Form Abandonment:** Simplifying gated asset forms (such as placement report downloads) will lower entry barriers, capturing higher raw lead volumes that sales can qualify later.
- **Streamline User Journeys:** Improving header menu architecture ensures students navigate smoothly from general exploration to specific course details without encountering cognitive roadblocks or dead ends.

Thank You
